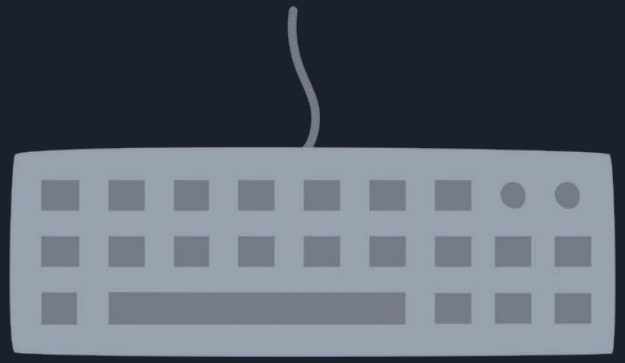
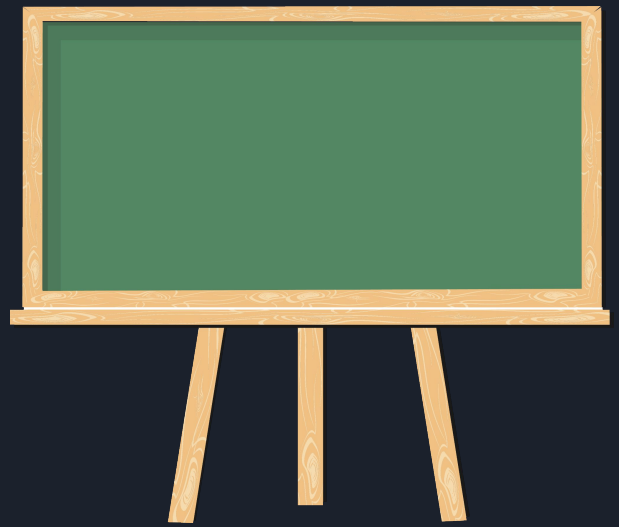
Today's Roadmap

1. *Introduction*
2. *Live Demonstration*
3. *Design Decisions*
4. *User Testing and Stakeholders*
5. *Results*
6. *Moving Forward*
7. *Conclusion*

Our Vision





=

Microsoft
Surface

Inspirations

Live Demonstration

Design Decisions

Design Decisions

- Using Typst.
  - A requirement for taking math-related notes
  - Intuitive and Faster due to realtime compilation.
- Cross Platform
  - Students can have Different Devices & situations
- Using Electron
  - MIT License (Free) and cross platform
- Why we chose local > web-based.
  - Minimize unneeded complexity from overloading keybinds
- Why we used a modal-based system.
  - diagram editing tool needs many features
  - limited keys and intuitive combinations

User Testing and Stakeholders

Usability Testing - Stakeholders

- Tested with students familiar with vim and note taking workflows
  - Pen and paper
  - Note taking apps
  - Google doc

- Users cared most about:
  - Efficient text entry
  - Intuitive navigation
  - Low learning curve

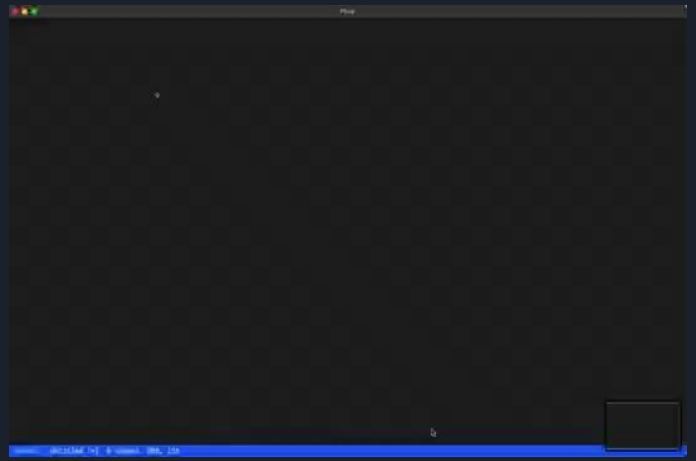
Usability Testing - Outline

Session:

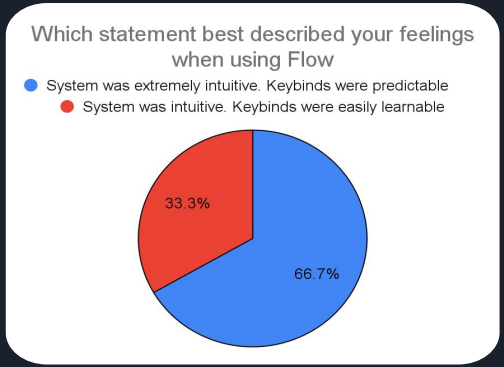
1. Overview features
2. Run usability test
3. Feedback

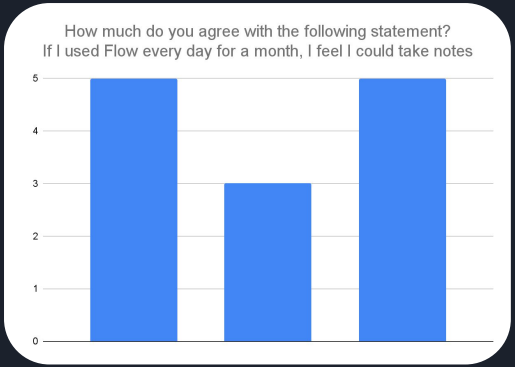
Goals:

- Collect qualitative and quantitative feedback
- Identify pain points



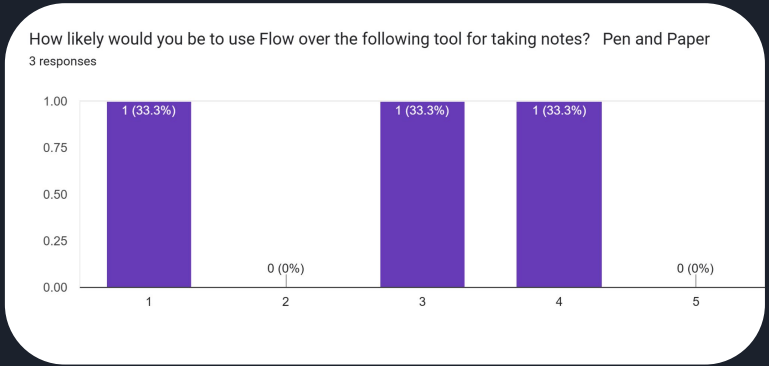
Usability Testing - Key Findings





- Best Features
  - Diagram positioning
  - Line mode / snapping

"The line mode is the best feature. Auto snapping and having multiple endpoints without having to think about it."



- Pain Points
  - Learning curve
  - Remembering keybinds

"Keeping track of which mode you need to be in takes getting used to."

Usability Testing - Changes Based on Feedback

Feedback	Change Made	Goal
- Hard to remember keybinds	- Added cheat sheet	- Reduce learning curve
- Switching mode interrupts focus	- Auto insert mode	- Make note-taking faster
- Cursor movement slow	- Larger cursor jumps	- Improve navigation speed
- Importing longer slide	- Infinite scrollable canvas	- Give more space to work with

Usability Testing - User Quotes

"I wish this existed two years ago when I was doing my undergrad, I definitely would have tried it”

"I could totally see myself using this with a few features added"

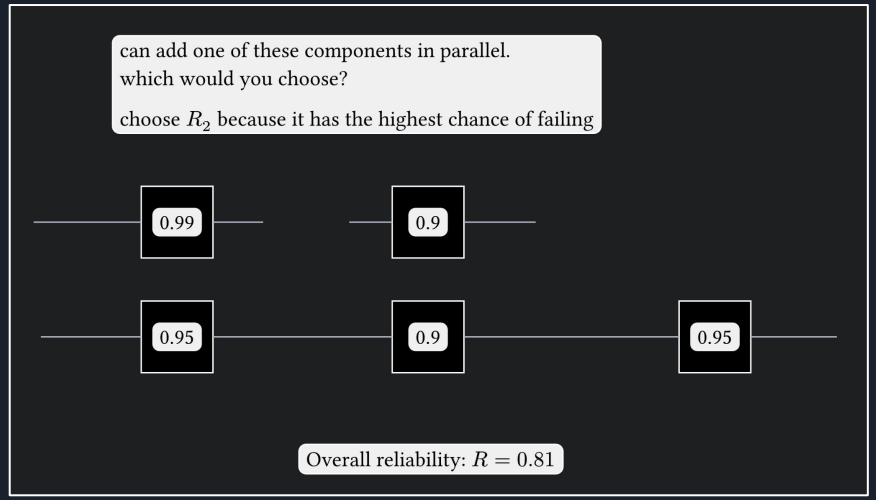
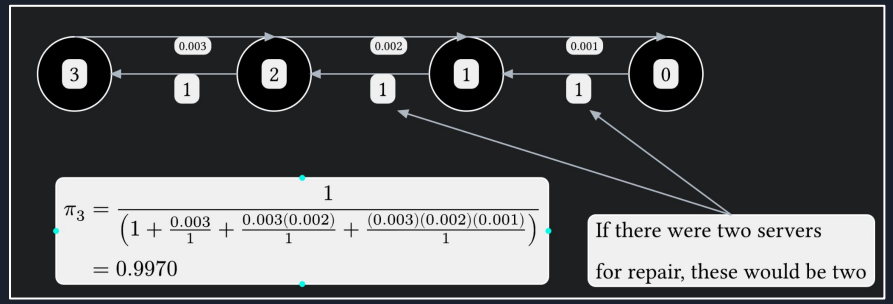
Results

Results - Product Outcome

A keyboard-driven diagram creation tool that works





*Real notes taken during SFWRENG 4E03 lectures this term.

Results - Learning Outcome

Investigated a new type of tool and how it could practically work

- Challenges - Usability quirks
- Importance of User testing
- Potential

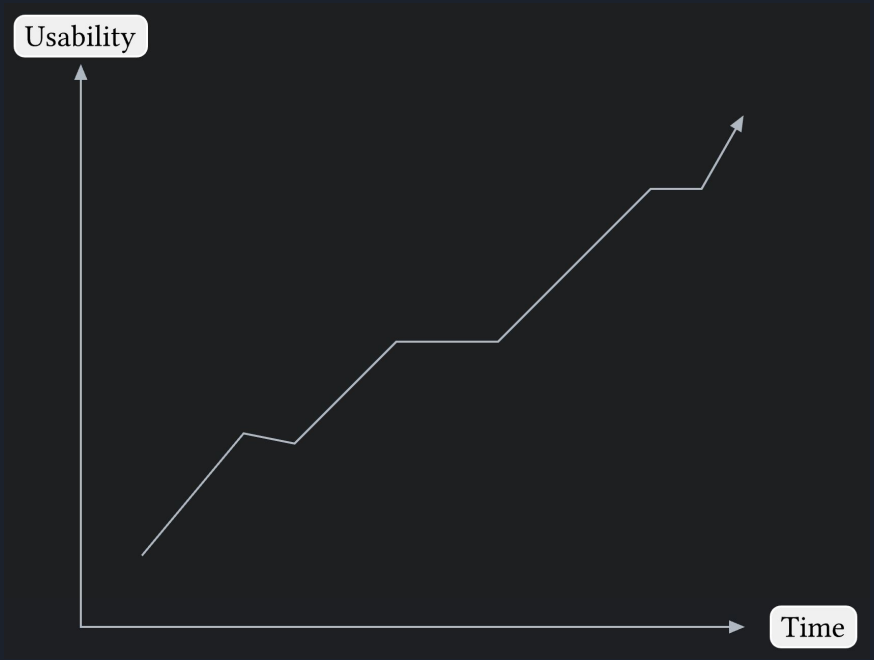


*Figure made with Flow

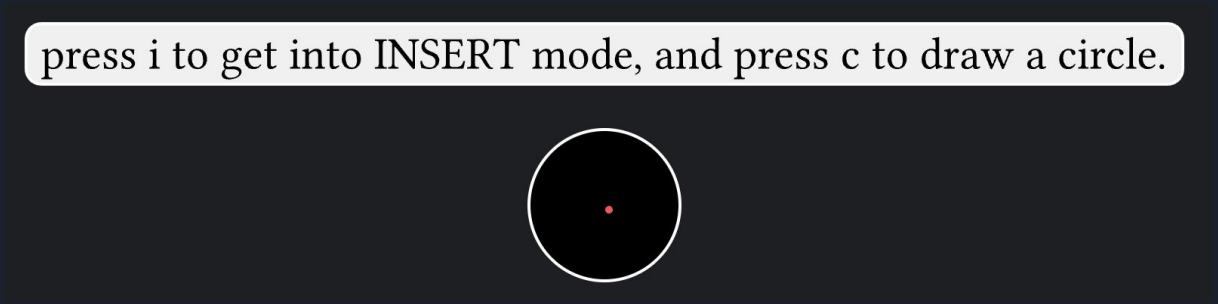
Moving Forward

Moving Forward - Our Next Steps

Addressing Current Limitations:

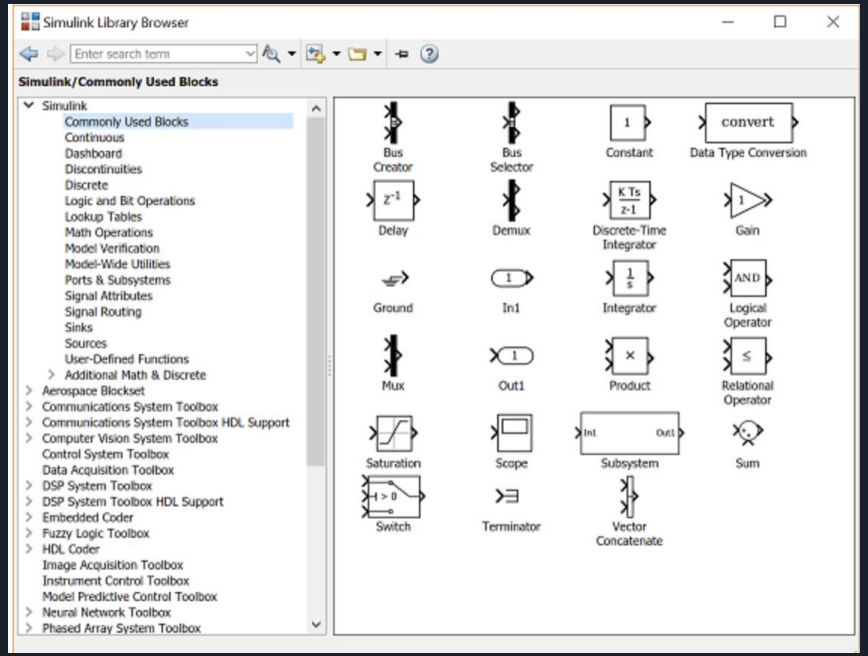
- Richer contents
- More export options(PNG, SVG)
- Steeper learning curve for non-Vim users



Moving Forward - Our Next Steps

Quality of Life:

- Custom keybindings
- Shape resizing
- Modifications according to user feedbacks



Conclusion

Summary

- Keyboard Based Note Taking App
  - Focus on efficiency and accessibility
  - Design Decisions
  - Testing
  - Future Plans
